> Airbnb Paris : Why some hosts are renting more than others?

General scope : Paris · 9 septembre 2022 → 31 janvier 2023

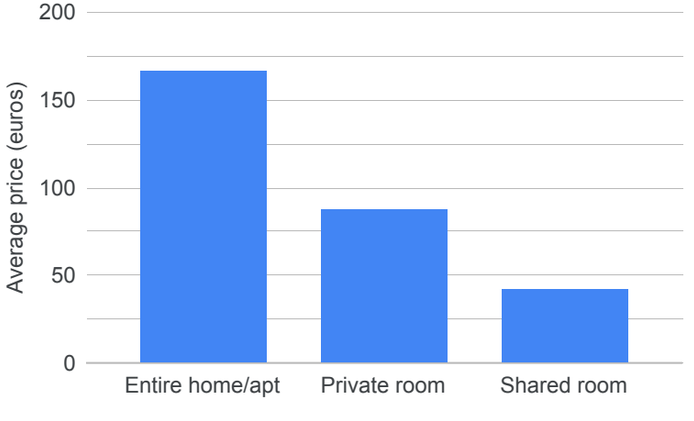

Sep 9, 2022 - Jan 31, 2023

Number Listings	Average price per night	Occupation Rate	Average review
500	158.02 €	75.68%	4.67

Room type repartition

Average price by room type

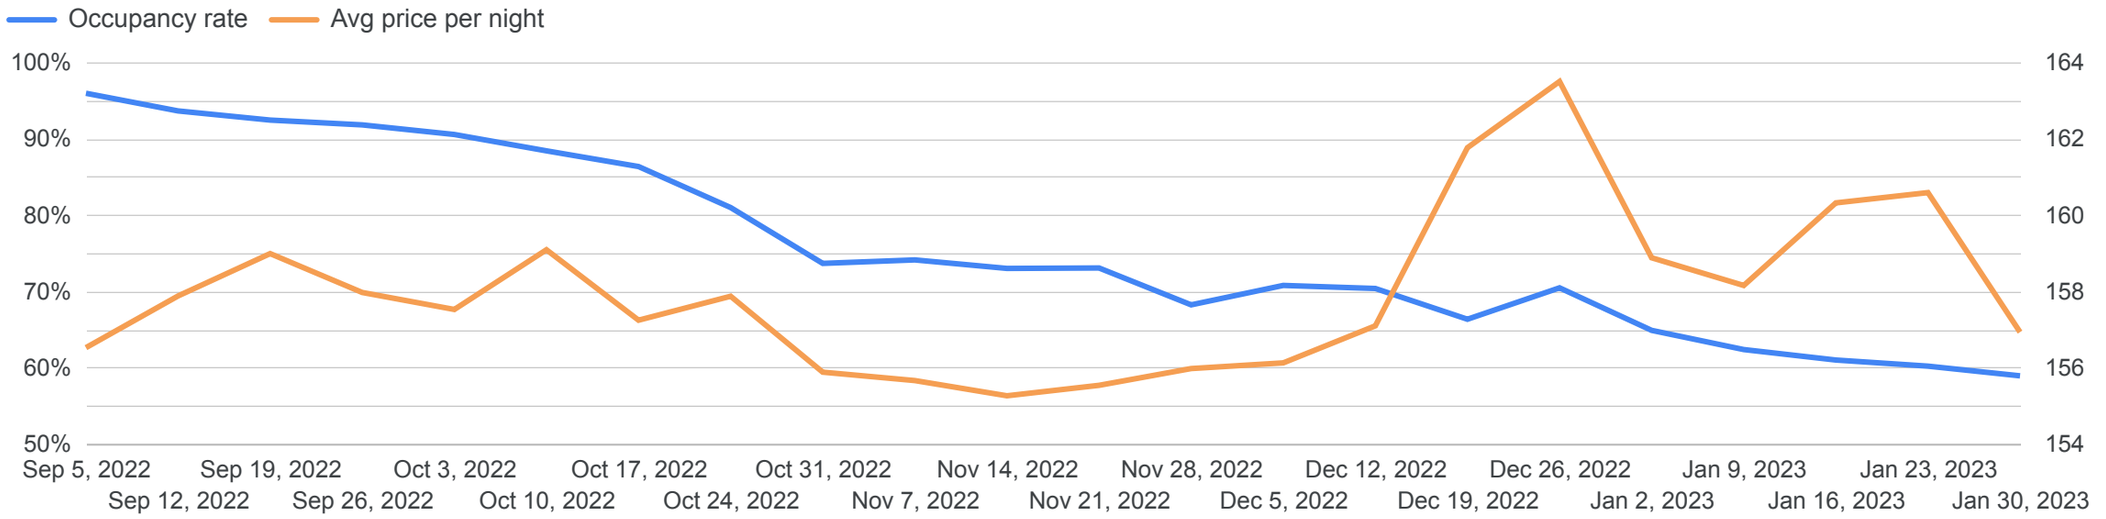

Do guests book more on weekends and holidays?

Room type

Hypothesis 2: Timing. And when demand goes up, do hosts raise their prices?

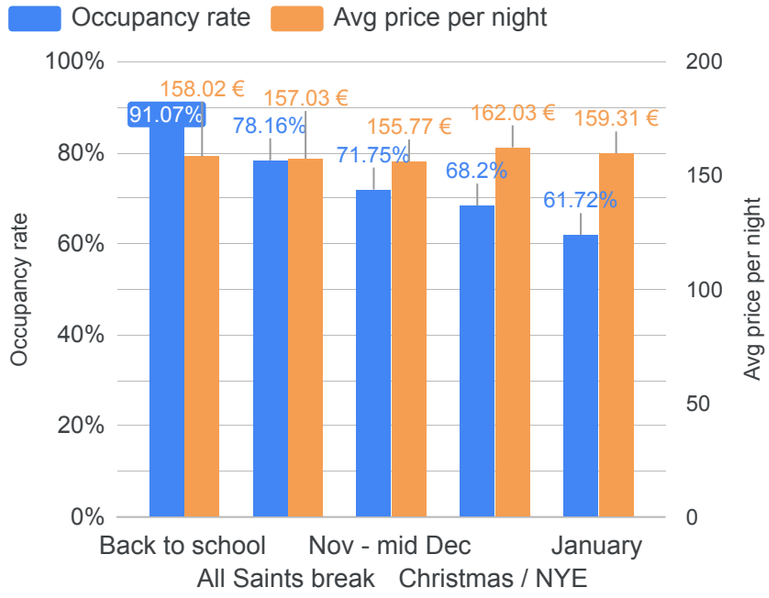

Bookings slide week after week, prices barely move

Weekends are barely busier

Christmas is the only time prices go up

What we found

Weekends: only a tiny bump. 76% of weekend nights are booked vs 75% on weeknights, for about 3 EUR more per night.

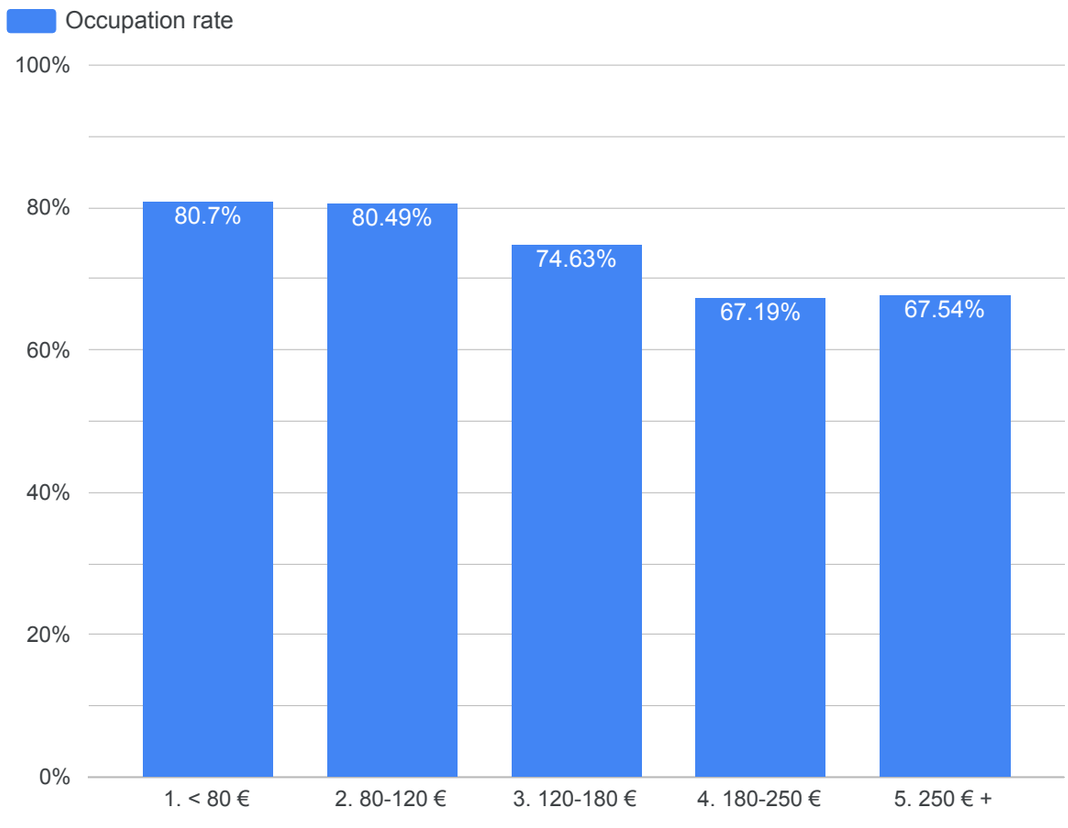

Holidays: bookings drop from 91% in September to 62% in January. That's mostly because far-off dates weren't booked yet when the data was pulled (Sept 2022**)**. Christmas still gets a small boost.

Prices: flat all season, between 155 and 164 EUR. Christmas is the only real jump (+4%).

So what? Most hosts set one price and leave it. Timing doesn't explain who rents more, but adjusting prices for holidays and weekends is easy extra money.

> Offer & price: do cheaper listings and entire homes rent more?

Occupation rate by price range (per night)

Key insights

• Cheaper nights book more: 81% occupancy under 120 € vs 67% above 180 €.

• Entire homes beat private rooms at almost every price (83% vs 64% at 80-120 €).

• Private rooms priced 180-250 € barely rent (29%).

→ **Hypothesis confirmed: price is the main lever, room type amplifies it.**

Occupation rate by room type and price range

					Price range / Occupation rate
Room type	1. < 80 €	2. 80-120 €	3. 120-180 €	4. 180-250 €	5. 250 € +
Shared room	83.33%	-	-	-	-
Private room	75.27%	64.36%	75.07%	29.17%	71.9%
Entire home/apt	82.55%	82.53%	74.6%	67.75%	67.49%

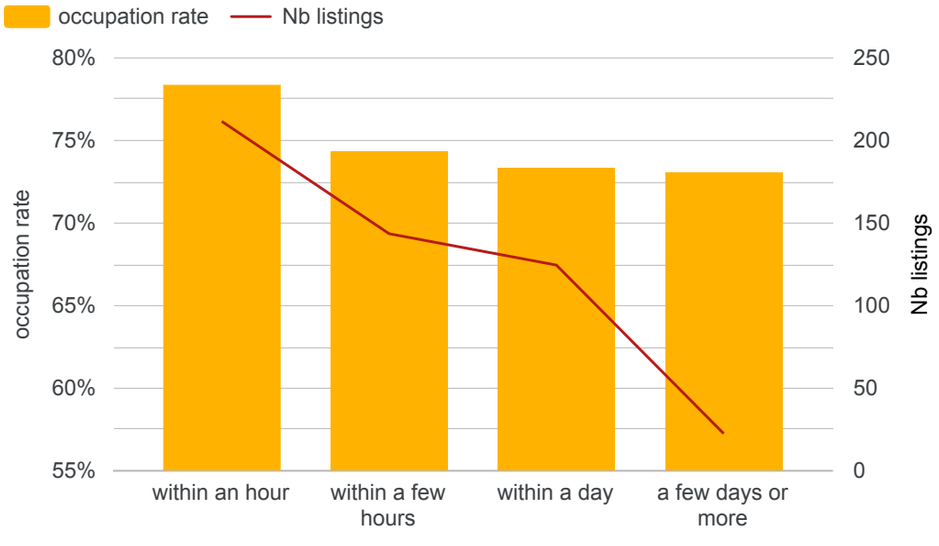

Do responsive and well-rated hosts rent more ?

Hypothesis : hosts who reply quickly and have higher ratings get more bookings

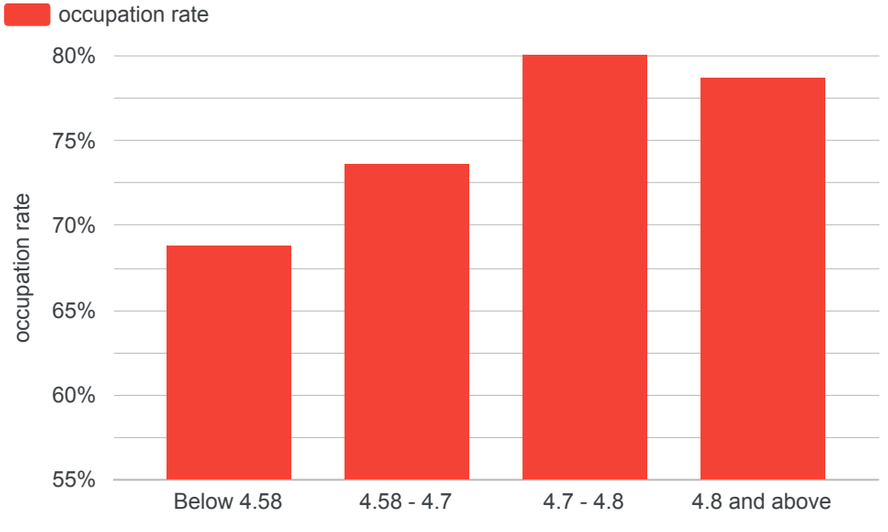

Sep 9, 2022 - Jan 31, 2023

room_type

Occupancy rate by host response time

Occupancy rate by rating range

Les hôtes réactifs louent un peu plus

Tout se joue dans la première heure

Mieux noté = plus loué, jusqu'à un plafond

après 4,7, une meilleure note ne change plus grand-chose.
Note utilisée : review_scores_value (rapport qualité-prix).

✅ **Hypothèse validée, mais la note pèse plus que la réactivité**

👉 reco : hôtes --> viser la meilleure note possible ramène davantage de clients et répondre dans l'heure. Au-delà de 4,7, le gain supplémentaire est faible.

Résultats portés à 90 % par les logements entiers ; les chambres privées (49) et partagées (1) sont trop peu nombreuses pour une analyse séparée.
